Equipment needed for my demonstration:

- I prefer to use a Lathe with 1 1/4 x 8 spindle and electronic variable speed, not a mini, that is not on wheels or a pallet. (I'm quite short!)
- Please let me know ahead of time what type of lathe the demo will be done on, especially if it differs from my preference above.
- The Triangular Box needs a variable speed regular size lathe.
- A short tool rest is also very good to have! I will bring my own, but it may not fit the demo lathe.
- Grinder with Wolverine platform and good quality, fine grit wheel (80-120).
- I will bring all the wood, chucks, equipment, etc that I need for the demos.
- A white board, chalk board, or flip chart to draw on during the demo.
- Superglue: ultra thin, medium (or thick), and accelerator
- I will email my handout sheets for you to copy. This saves baggage weight and space.
- I need at least an hour to set up before the demo starts. This can be early the same day, or the day before. Please be sure that we can have access to the hall for set up.
- I have my own wireless microphone that I can bring if you don't have one. It plugs into the television or VCR. Please let me know.
- I also have a digital projector to give a "slide" show if that fits into the program. And/or I can bring a converter that plugs my computer into the tv to show "slides" on the monitor during the demo. I won't be necessarily bringing all of this video/audio stuff unless it will be useful, so please let me know.
